This data may differ in your home due to changing conditions in inlet water temperature, water pressure etc. Approximate programme duration values refer to the default setting of the programmes, without options. The values given for programmes other than the Eco 40-60 programme are indicative only.

For all Test Institutes

1) Eco 40-60 (Wash)-Test wash cycle in compliance with EU Ecodesign regulation 2019/2014. The most efficient programme in terms of energy and water consumption for washing normally soiled cotton

4) Eco 40-60 (Wash&Drying)- Test wash&drying cycle in compliance with EU Ecodesign regulation 2019/2014. To access "wash and dry" cycle select "Eco 40-60" wash programme and set "Drying" option level to "#". The most efficient programme in terms of energy and water consumption for washing and drying normally soiled cotton laundry. At the end of cycle the garments can be immediately stored to the cupboard.

- 2) Long cotton programme: set the "2" programme with a temperature of 40°C. 3) Synthetic program along: set the "3" programme with a temperature of 40°C.
- $^{st}$  After programme end and spinning with maximum selectable spin speed, in default programme setting.
  \*\*The display will show the suggested spin speed as default value.

Note: for the Eco 40-60 program in the WASH CYCLE TABLE the value of the maximum effective spin is shown.

# **DETERGENT DISPENSER DRAWER**

### Compartment 1:

Do not insert detergent in this compartment. Compartment 2: Washing detergent (powder

or liquid) Compartment 3: Additives (fabric softener, etc.)

The fabric softener must never exceed the "max" level indicated on the central pin.

! Use powder detergent for white cotton garments, for pre-washing, and for washing at temperatures over 60°C.

! Follow the instructions given on the detergent packaging.

### WASH CYCLES

Follow the instructions on the symbols of the garment's wash care label. The value indicated in the symbol is the maximum recommended temperature for washing the garment.

For washing lightly to normally soiled resilient garments in cotton, linen, synthetic fibres and mixed fibres.

Cotton

Suitable for washing towels, underwear, table cloths, etc. made of resistant linen and cotton that are moderately to heavily soiled.

Synthetics

Suitable for washing moderately soiled garments made of synthetic fibres (e.g. polyester, polyacrylic, viscose, etc.) or mixed synthetic-cotton fibres. White

For heavily soiled whites and resistant colours.

Colours

A 30°C cycle that helps to preserve colours, suitable for cotton or synthetic coloured garments. It allows for reducing electricity consumption for heating the water while guaranteeing good washing results. Suitable for lightly soiled garments.

Eco 40-60

For washing normally soiled cotton garments declared to be washable at 40 °C or 60 °C, together in the same cycle. This is the standard cotton programme and the most efficient in terms of water and energy consumption.

Sport

A cycle designed for washing lightly soiled sports clothing (tracksuits, shorts, etc.); for best results, we recommend not exceeding the maximum load indicated in the "Wash Cycle Table". We recommend using liquid detergent and adding the amount suitable for a half-load.

For washing lightly soiled cotton garments, at a temperature of 20 °C. **Anti Odour** 

use programme for washing garments with bad odours (e.g. smoke, sweat, fried food). The programme is designed to remove bad odours while preserving the fabric fibres. Synthetics fabrics or mixed loads should be washed at 40°, and resistant cotton fabrics at 60°.

**Delicates** 

use programme to wash very delicate garments. It is advisable to turn the garments inside out before washing them. For best results, use liquid detergent on delicate garments.

When selecting an exclusively time-based drying function, a drying cycle is performed at the end of the wash cycle that is particularly delicate, thanks to light handling and appropriate temperature control of the water jet. The recommended durations are:

1 kg of synthetic garments --> 150 min

1 kg of synthetic and cotton garments --> 180 min

1 kg of cotton garments --> 180 min

The degree of dryness depends on the load and fabric composition.

Wool - Wool Care:

The wool wash cycle of this machine has been approved by The Woolmark Company for the washing of machine washable wool products provided that the products are washed according to the instructions on the garment label and those issued by the manufacturer of this washing machine. The Woolmark symbol is a Certification mark in many countries. M2227.

Rapid 30

For washing lightly soiled garments in a short time. Not suitable for wool, silk and garments to be washed by hand.

Wash&Dry 45 min

select programme for washing and drying lightly soiled garments (Cotton and Synthetic) in a short time. This cycle may be used to wash and dry a laundry load of up to 1 kg in just 45 minutes. To achieve optimum results, use liquid detergent and pre-treat cuffs, collars and stains.

ideal cycle to refresh garments and remove bad odours, in particular smoke, from cotton and synthetic items in 30' (max 1.5kg) without the washing phase. **Rinse + Spin** 

Designed for rinsing and spinning.

Spin + Drain

Designed to spin and drain the water.

# WASH CYCLE PHASE INDICATOR LIGHTS

Once the desired wash cycle has been selected and has begun, the indicator lights switch on one-by-one to indicate which phase of the cycle is currently in progress.

Wash Rinse **(** 

Spin/Drain Drying

**END** End of Wash Cycle

### **□ DOOR LOCKED INDICATOR**

When lit, the symbol indicates that the door is locked. To prevent any damage, wait until the symbol turns off before opening the door To open the door while a cycle is in progress, press the START/PAUSE 🕅 button; if the indicator light is off, the door can be opened.

### FIRST-TIME USE

Once the appliance has been installed, and before it is used for the first time, run a wash cycle with detergent and no laundry, by setting the 'Auto-Clean" cycle.́

### **DAILY USE**

Prepare the laundry by following the suggestions appearing under the

"TIPS AND SUGGESTIONS" section.

Rapid programming

-Turn the washing machine on by pressing the ON/OFF () button. All the indicator lights will light up for a few seconds, then only the lights corresponding to the settings for the selected wash cycle will remain lit; the START/PAUSE [>]] indicator light will also flash.

- Open the door. Load the laundry while making sure not to exceed the

maximum load quantity indicated in the cycle table.
- Pull out the detergent dispenser drawer and pour the detergent into the relevant compartments as described in "DETERGENT DISPENSER DRAWER section".

Close the door

# STARTING CYCLE Press the PUSH & GO.

The machine will lock the door ( symbol on) and the drum will start to rotate; the door will be unlocked ( symbol OFF) and then locked again ( symbol on) as preparation phase of each washing cycle. The "Clicking" noise is part of the door locking mechanism. Water will enter the drum and start the washing phase once the door is locked.

**Traditional programming** 

-Turn the washing machine on by pressing the ON/OFF () button. All the indicator lights will light up for a few seconds, then only the lights corresponding to the settings for the selected wash cycle will remain lit; the START/PAUSE [ indicator light will also flash.

- Open the door. Load the laundry while making sure not to exceed the maximum load quantity indicated in the Wash Cycle Table.

- Pull out the detergent dispenser drawer and pour the detergent into the relevant compartments as described in "DETERGENT DISPENSER DRAWER" section.

Close the door.

- Set the WASH CYCLE knob to the desired cycle.
- Modify the temperature: pressing the button allows for gradually reducing the temperature down to the cold wash level (\*\*).

Select the desired wash cycle.

- Select the desired options. **STARTING CYCLE** 

Press the START/PAUSE DI button.
The machine will lock the door ( symbol on) and the drum will start to rotate; the door will be unlocked ( symbol OFF) and then locked again ( symbol on) as preparation phase of each washing cycle. The "Clicking" noise is part of the door locking mechanism. Water will enter the drum and start the washing phase once the door is locked.

### PAUSING A CYCLE

### **OPENING THE DOOR, IF NECESSARY**

Once a cycle starts, the indicator light turns on to signal that the door cannot be opened. While a wash cycle is running, the door remains locked. To open the door while a cycle is under way, for example, to add or remove garments, press the START/PAUSE \( \) button to pause the cycle; the indicator light will flash. If the \( \) indicator light is not lit, the door may be opened. Press the START/PAUSE \( \) button again to continue the cycle.

### CHANGING A RUNNING WASH CYCLE

To change a wash cycle while it is in progress, pause the washing machine using the START/PAUSE ▷∭ button (the relative indicator light will flash ), then select the desired cycle and press the START/PAUSE ▷∭ button again.

! To cancel a cycle that has already begun, press and hold the ON/OFF (1)

button.

The cycle will be stopped and the machine will switch off.

# **END OF THE CYCLE**

Once the cycle terminates the **END** indicator light will light up; when the indicator light switches off, the door may be opened. Open the door, unload the laundry and switch off the machine. If you do not press "ON/OFF" OFF"  $\bigcirc$  button, the washing machine will switch off automatically after about a 10 minutes. Close the water tap, open the door and unload the washing machine. Leave the door ajar to allow the drum to dry.

# **FUNCTIONS**

- If the selected option is not compatible with the set wash cycle, the indicator light will flash and the option will not be activated.

- If the selected option is not compatible with another previously selected option, the indicator light will flash accompanied by a buzzer, and only the latter option will be activated; the indicator light corresponding to the activated option will turn on.

Stain removal

This option allows for selecting the type of dirt so as to optimally adjust the cycle for removing the stains. The following types of dirt can be selected:

Food: for stains caused by foodstuffs and beverages, for example.

Work: for grease and ink stains, for example. Work: for grease and ink stains, for example.
Outdoor: for mud and grass stains, for example.

! The wash cycle duration varies according to the type of selected dirt.

100 Slow Spin

By selecting this function, reduces the spin speed.

By selecting this option, the efficiency of the rinse is increased and optimal detergent removal is guaranteed. It is particularly useful for sensitive skin.

**Temperature** 

Each wash cycle has a pre-defined temperature. To modify the temperaturé, press the C button.

Drying

Drying may be set as follows:

্ৰি - Based on the desired laundry dryness level: Iron "এ": suitable for clothes which will need ironing afterwards. the remaining dampness softens creases, making them easier to remove. **Hanger** ">": ideal for clothes which do not need to be dried fully. **Cupboard** "=": suitable for laundry which can be put back in a cupboard without being ironed.

The state of the load. A state of the state cooling-down period is always added to the end of each drying cycle.

Press button (2) to perform the drying-only cycle.

After selecting the desired cycle (compatible with the type of garments),

The exclude the washing phase and start the drying phas press button 👏 to exclude the washing phase and start the drying phase at the maximum level for the selected cycle.

Push & Go

To start the Push & Go cycle press and hold the button for 2 seconds. The indicator lights up to show that the cycle has started. The wash and drying cycle is ideal for cotton or synthetic fabrics, as it washes them at a temperature of 30° and a maximum spin speed of 1000 rpm. During the drying cycle the maximum temperature is 60°C. At the end of the cycle the residual humidity will be the same as for the "I level. Max recommended load 3,5 kg. (Cycle duration 210'). How does it work?

Load the laundry (cotton and/or synthetic garments) and close the door.
 Pour the detergent and/or additives.

3. Start the cycle by pressing and holding the Push & Go button for 2 seconds. The relevant indicator light will turn green and the door will lock (the DOOR LOCKED symbol is lit).

NB: starting the cycle through the Push & Go button activates an automatic non-customisable wash and drying cycle recommended for cotton and synthetic fabrics.

4. The automatic cycle can be used only for washing, excluding the drying phase. Press the Push & Go button and then the drying button of the "A" level will switch off. Maximum load for washing-only is 4 kg (Cycle duration 45'). The cycle cannot be customised further. To ópen the door while an automatic cycle is under way, press the START/ PAUSE button. If the DOOR LOCKED symbol is off, the door may be opened only during the washing phase. Press the START/PAUSE button again to restart the wash cycle from the point at which it was interrupted. 5. Once the programme is finished, the **END** indicator light turns on.

### TIPS AND SUGGESTIONS

Divide the laundry according to:
Type of fabric (cotton, mixed fibres, synthetics, wool, garments to be hand-washed). Colour (separate coloured garments from whites, wash new coloured garments separately). Delicates (small garments – such as nylon stockings – and items with hooks – such as bras: insert them in a fabric bag).

Empty the pockets:
Objects such as coins or lighters can damage the washing machine and thé drum. Check all buttons.

Follow the dosage recommendation / additives

It optimizes the cleaning result, it avoids irritating residues of surplus detergent in your laundry and it saves money by avoiding waste of surplus detergent

Use low temperature and longer duration

The most efficient programmes in terms of energy consumption are generally those that perform at lower temperatures and longer duration. **Observe the load sizes** 

Load your washing machine up to the capacity indicated in the "PROGRAMME CHART" table to save water and energy.

Noise and remaining moisture content

They are influenced by the spinning speed: the higher the spinning speed in the spinning phase, the higher the noise and the lower the remaining moisture content

### **CARE AND MAINTENANCE**

Before performing cleaning and maintenance, switch the washing machine off and disconnect it from the mains power. Do not use flammable liquids to

clean the washing machine. Clean and maintain your washer - dryer periodically (at least 4 times per year).

Disconnect the water and power supplies

Close the water tap after every wash. This will limit wear on the hydraulic system inside the washing machine and help to prevent leaks.

Unplug the washing machine when cleaning it and during all maintenance work.

Clean the washing machine

The outer parts and rubber components of the appliance can be cleaned using a soft cloth soaked in lukewarm soapy water. Do not use solvents or abrasives. The washing machine has a "Auto-clean" cycle for its internal parts; it must be run without any load in the drum.

To optimise this cycle, it is possible to use either detergent (10% of the quantity specified for lightly soiled garments) or special additives to clean the washing machine. We recommend running a cleaning cycle every 40 wash cycles. To start the cycle press buttons (a) and (b) simultaneously for 5 seconds. The cycle will start automatically and will run for about 70 minutes. To stop the cycle, press the START/PAUSE (b) button.

Clean the detergent dispenser drawer

Wash it under running water; this operation should be repeated frequently.

Care for the door and drum

Always leave the porthole door ajar in order to prevent unpleasant

odours from forming. **Check the water inlet hose** 

Check the water inlet hose at least once a year. If it is cracked or broken, it must be replaced: during wash cycles, the high pressure of the water could suddenly split the hose open.

! Never use hoses that have already been used.

Cleaning the water filter / draining residual water Switch off and unplug the washing machine, take out the kitchen plinth before cleaning the water filter or draining residual water. The kitchen plinth must be mounted back all the time once the cleaning

operation is over.

If you used a hot wash programme, wait until the water has cooled down before draining any water. Clean the water filter regularly, to avoid that the water cannot drain after the wash due to obstruction of the filter. If the water cannot drain, the display indicates that the water filter may be clogged.

1. Place a container close to the pump to collect any spillage.

2. Remove, pulling it out, the "emergency drain hose" from the base of the washing marking.

the washing machine.

Remove the stopper of the "emergency drain hose" at the end of the hose and let the water flow into the container.

3. Turn the exhaust filter handle and pull it out of the housing . When the container of plinth is full with water, plug the stopper to the hose end, and reinsert the small hose in the washing machine's base . After, empty the container.

Afterwards firmly close the emergency drain hose with the stopper 4. Remove filter: Lay a cotton cloth beneath the water filter, which can absorb a small amount of rest water . Then remove the water filter by turning it out anticlockwise .

5. Clean the water filter: remove residues in the filter and clean it under running water

6 . Insert the water filter: Reinsert the water filter again by turning it in clockwise direction . Make sure to turn it in as far as it goes; the filter handle must be in vertical position . To test water tightness of the water filter, you can pour about 1 liter of water into the detergent dispenser.

Then reinstall the kitchen plinth.

### LOAD BALANCING SYSTEM

Before every spin cycle, to avoid excessive vibrations before every spin and to distribute the load in a uniform manner, the drum rotates continuously at a speed which is slightly greater than the washing rotation speed. If, after several attempts, the load is not balanced correctly, the machine spins at a reduced spin speed. If the load is excessively unbalanced, the washing machine performs the distribution process instead of spinning. To encourage improved load distribution and balance, we recommend small and large garments are mixed in the load.

### TRANSPORT AND HANDLING

Do not lift the washing machine by gripping it from the upper section. Unplug the appliance and close the water tap. Check that the door and detergent dispenser drawer are tightly closed. Detach the filling hose from the water tap then detach the drain hose. Empty all the water remaining in the hoses and secure the latter so that they do not get damaged during transport. Apply the transport bolts back on. Repeat, in reverse order, the transport bolt removal procedure described in the "Health & Safety and Installation Guides".

# **TROUBLESHOOTING**

The washing machine may occasionally fail to work. Before contacting the Technical Assistance Service, make sure that the problem cannot be easily solved using the following list.

to back-siphonage, causing the washing machine to fill with water and drain continuously. Special anti-siphon valves are available in shops and help to prevent this inconvenience.  The washing machine does not drain or spin.  The drain hose is bent. The drainage duct is clogged. The washing machine vibrates a lot during the spin cycle.  The washing machine is not unlocked correctly during installation. The washing machine is not level. The washing machine is tucked between furniture cabinets and the wall. The washing machine is not screwed on properly. The detergent dispenser drawer is obstructed. The drain hose is not properly attached.  Switch off the machine and unplug it, wait for approximately 1 minute and then switch it back on again. If the problem persists, contact the Technical Assistance Service.  The detergent is not suitable for machine washing (it should be marked with "for washing machine use" or "hand wash and machine wash" or similar).  Too much detergent was used.  After switching on the machine, a control other than Push & Go was activated. Switch the machine off and press the nature of the problem persists and the push of the machine off and press the problem persists.
